ABSTRACT:

PROBLEM TO BE SOLVED: To authenticate also a true owner of an IC card when authenticating a specific system by the IC card.

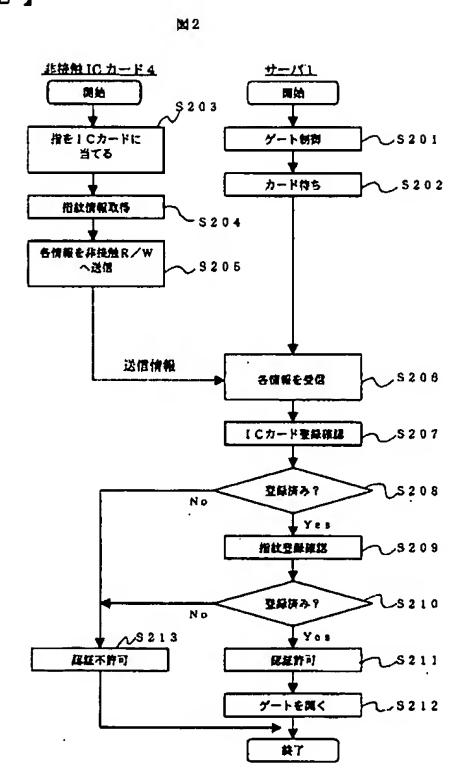

SOLUTION: The <u>card</u> information of IC <u>cards</u> each of non-contact type and the <u>fingerprint</u> information of a true owner of the IC card has been registered in a database 2 as <u>registered card</u> information 2a and <u>registered fingerprint</u> information 2b. When a user of the non-contact IC card 4 puts the IC card 4 on a non-contact reader/writer 3 and touches a fingerprint input means of the IC card 4 with a finger, the fingerprint information is read out by the IC card 4 and the fingerprint information and the card information 4e are read out together by a server 1 through the non-contact reader/writer 3. The server 1 confirms whether the <u>card</u> information 4e has been <u>registered as the registered</u> information 2a or not to authenticate the IC <u>card</u> 4, and when the IC <u>card</u> 4 is authenticated, confirms whether the <u>fingerprint</u> information has been <u>registered</u> as the <u>fingerprint</u> information has been <u>registered</u> as the <u>fingerprint</u> information 2b or not to authenticate the <u>gard</u> user.
